

Omar Tamer

Software Engineer & Cybersecurity Analyst

Cairo, Egypt | omarscareer002@gmail.com | github.com/omartamer002 | linkedin.com/in/omartamer002

PROFESSIONAL SUMMARY

Software Engineer and Cybersecurity Analyst specializing in building secure, scalable web applications using Node.js, Go, and Python (Django). Combines strong development expertise with hands-on experience in threat detection, SIEM tools, and vulnerability assessment to deliver high-performance systems with a security-first mindset. Passionate about leveraging modern technologies and AI to drive efficiency, innovation, and real-world impact, while actively pursuing global opportunities in software engineering and cybersecurity.

EDUCATION

B.Sc. in Computer Science & Information Technology 2020 – 2024

Arab Open University · Cairo, Egypt

- Key subjects: Data Structures, Artificial Intelligence, Machine Learning, Operating Systems, Software Design, Computer Networking, IT Governance & Compliance, Data Management & Analysis, Linear Algebra, .NET / C# / Java / PHP

PROJECTS

AI Wafaa Clinic Management System 2024

Python · Django 5 · SQLite · Google Gemini AI · Bootstrap 5 · github.com/omartamer002/Clinic-Management-System

- Built a full-featured medical clinic management platform in Django with dynamic role-based accounts for patients and doctors, each with separate registration and profile management flows.
- Integrated an AI-powered chatbot using Google Gemini (Generative AI SDK) to help patients identify relevant departments based on symptoms and receive specialist recommendations, with a keyword-based fallback system for API limit resilience.
- Implemented smart appointment booking, a browsable medical specialist directory filterable by specialization and department, and support for user-uploaded content (CVs, profile pictures).
- Delivered a modern UI/UX with Bootstrap 5, custom CSS animations, and AOS (Animate On Scroll), following a premium-first design approach. Configured via decoupled .env environment variables, production-ready for PostgreSQL/MySQL.

Event Management System 2024

Go · Gin · SQLite · JWT · Bcrypt · github.com/omartamer002/Event-Management-System

- Engineered a professional RESTful API in Go using the Gin web framework, supporting full CRUD operations for events with a clean separation of concerns across Models, Routes, Middlewares, and Database layers.
- Implemented secure user authentication with JWT (JSON Web Tokens) and bcrypt password hashing, protecting all write operations behind authorization middleware.
- Built ownership-based authorization ensuring only the event creator can update or delete their events, plus user registration and cancellation endpoints for event sign-ups.
- Produced full architectural documentation including Class, Sequence, Control Flow, UML, and Use Case diagrams stored in the repository.

Cybersecurity Diploma Final Project 2025

AMIT Learning — SOC Analyst Diploma

- Analyzed network traffic using Wireshark by investigating two PCAP files to identify suspicious activities and potential threats.
- Utilized SGUIL, SQUERT, and Kibana for security event monitoring, alert analysis, and log correlation.
- Performed threat intelligence analysis using VirusTotal and Cisco Talos to investigate malicious IP addresses and files.
- Conducted malware analysis by examining suspicious files and identifying indicators of compromise (IOCs).
- Analyzed phishing and malicious emails using Encryptomatic, identifying attack patterns and social engineering techniques.
- Documented findings and produced incident analysis reports with identified IOCs and recommended mitigation steps.

TECHNICAL SKILLS

Languages	Python, Go (Golang), JavaScript, Java, C#, PHP, HTML5, CSS3
Backend	Django, Django REST Framework, Node.js, Express.js, Gin, REST APIs, JWT, Bcrypt
Frontend	Bootstrap 5, React.js, jQuery, AOS, Vanilla JS
AI / ML	Google Gemini AI (Generative AI SDK), OpenAI API, Prompt Engineering, Chatbot Integration
Databases	SQLite, PostgreSQL, MySQL, MongoDB
Cybersecurity	SIEM (SGUIL, SQUERT, Kibana), Wireshark, VirusTotal, Cisco Talos, Encryptomatic, SOC Operations, Network Security, Endpoint Security, Vulnerability Assessment, Malware Analysis, IOC Identification, Threat Intelligence
Networking	CCNA (Cisco), IPv4/IPv6, DHCP, Routing, Packet Tracer, Wireless Networking, Network Design
DevOps & Tools	Docker, Docker Swarm, CI/CD, Jenkins, GitHub Actions, Git, Bash, Linux, Windows Server
Concepts	OOP, REST Architecture, Role-Based Access Control, Agile, Waterfall, Software Engineering

CERTIFICATIONS & COURSES

- **Networking Basics (CCNA)** · Cisco
- **Networking Devices and Initial Configuration** · Cisco
- **Endpoint Security** · Cisco
- **Introduction to Cybersecurity** · Cisco
- **Getting Started with Docker** · Simplilearn
- **CI/CD for Beginners** · Simplilearn
- **Go – The Complete Guide** · Udemy
- **Node.js – The Complete Guide** · Udemy
- **Fundamentals of Digital Marketing** · Google Digital Garage
- **Cybersecurity SOC Diploma** · AMIT Learning
- **Python Django Backend Development Course** · ILearnCode
- **Cybersecurity: Go To Market Bootcamp** · Google Developer Groups Cairo
- **The Modern Era of Cybersecurity in the Age of AI** · Hash
- **Content Marketing Certification** · HubSpot Academy
- **Learn Git & GitHub** · Codecademy
- **Learn the Command Line** · Codecademy
- **English B2** · The American University in Cairo

LANGUAGES

Arabic — Native **English** — Professional working proficiency **French** — Proficient
